DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art does not specifically disclose or fairly suggest a system or method for coherent wavelength-shift multiplexing including all the limitations, elements, and/or steps specifically recited in claims 1 and 12, particularly including first and second modulation devices configured to modulate first and second daughter signals in accordance with first and second modulation waveforms, wherein the first modulation waveform is configured to shift the base wavelength to substantially match the wavelength pattern of a reference channel, the second modulation waveform is configured to shift the base wavelength to substantially match the wavelength pattern of a data channel, and the second modulation waveform is pre-modulated to encode a data signal into the data channel signal. The prior art also does not specifically disclose or fairly suggest a system or method for coherent wavelength-shift demultiplexing including all the limitations and elements specifically recited in claim 20.

Ishikawa et al. (US 5,717,510 A) generally discloses an apparatus (Figure 95) including photonic input and output paths, a splitter 404 configured to split a photonic input signal into first and second daughter signals, first and second modulation devices 408 and 412 configured to modulate the first and second daughter signals, and a combiner 416. However, although Ishikawa et al. further disclose drive circuits 418 and 420 which drive the modulators, they do not specifically disclose or suggest a modulation synthesizer configured to provide a first modulation waveform configured to shift the base wavelength to substantially match the wavelength pattern

Art Unit: 2633

of the reference channel, provide a second modulation waveform configured to shift the base wavelength to substantially match the wavelength pattern of the data channel, and pre-modulate the second modulation waveform to encode the data signal into the data channel signal.

Fee (US 5,663,822 A) also generally discloses an apparatus (Figure 1) including photonic input and output paths 18 and 24, a splitter 19, a plurality of modulation devices 21_1 - 21_n , and a combiner 22. However, Fee do not specifically disclose or suggest a modulation synthesizer including the limitations such as recited in claim 1.

Ishikawa et al. and Fee also do not specifically disclose or suggest a demultiplexing apparatus including a modulation synthesizer, a modulation device, and a coherence detector as specifically recited in claim 20.

Huggins et al. (US 4,866,698 A) generally disclose an apparatus for demultiplexing including a photonic input path with a signal comprising a reference and a data channel (Figure 1), but they also not specifically disclose or suggest a demultiplexing apparatus including a modulation synthesizer, a modulation device, and a coherence detector as specifically recited in claim 20.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
